| Student Roll Number | 510119205013 |
| Maximum Marks | 2 |

## Basic Python

### 1. Split this string

```
s = "Hi there rajesh!"

x = s.split()
print(x)
```

```
['Hi', 'there', 'rajesh!']
```

*italicized text*## 2. Use .format() to print the following string.

**Output should be: The diameter of Earth is 12742 kilometers.**

```
planet = "Earth"
diameter = 12742

txt = "The diameter of {planet} is {diameter}
kilometers".format(planet = "Earth",diameter = 12742)
print(txt)
```

```
The diameter of Earth is 12742 kilometers
```

### 3. In this nest dictionary grab the word "hello"

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':
[1,2,3,'hello']}]}]}

print(d['k1'][3]['tricky'][3]['target'][3])
```

```
hello
```

## Numpy

```
import numpy as np
```

### 4.1 Create an array of 10 zeros?

### 4.2 Create an array of 10 fives?

```
array = np.zeros(10)
print("The array of 10 Zeros are:")
print(array)
```

```
The array of 10 Zeros are:
[0. 0. 0. 0. 0. 0. 0. 0. 0. 0.]
```

```
array = np.ones(10)*5
print("The array of 10 Fives are:")
print(array)
```

```
The array of 10 Fives are:
[5. 5. 5. 5. 5. 5. 5. 5. 5. 5.]
```

### 5. Create an array of all the even integers from 20 to 35

```
x =  np.arange(0, 9).reshape(3,3)
print(x)
```

```
[[0 1 2]
 [3 4 5]
 [6 7 8]]
```

### 6. Create a 3x3 matrix with values ranging from 0 to 8

```
x =  np.arange(0, 9).reshape(3,3)
print(x)
```

```
[[0 1 2]
 [3 4 5]
 [6 7 8]]
```

### 7. Concatinate a and b

### a = np.array([1, 2, 3]), b = np.array([4, 5, 6])

```
a = np.array([1, 2, 3])
b = np.array([4, 5, 6])
c = np.concatenate([a,b])
print(c)
```

```
[1 2 3 4 5 6]
```

## Pandas

### 8. Create a dataframe with 3 rows and 2 columns

```
import pandas as pd

data = [['prakash', 20], ['rajesh', 19], ['aakash', 19]]
df = pd.DataFrame(data, columns=['Name', 'Age'])
print(df)
```

```
      Name  Age
0  prakash   20
1   rajesh   19
2   aakash   19
```

### 9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023

```
pd.date_range(start='1/1/2023', end='02/10/2023')
```

```
DatetimeIndex(['2023-01-01', '2023-01-02', '2023-01-03', '2023-01-04',
               '2023-01-05', '2023-01-06', '2023-01-07', '2023-01-08',
               '2023-01-09', '2023-01-10', '2023-01-11', '2023-01-12',
```

```
               '2023-01-13', '2023-01-14', '2023-01-15', '2023-01-16',
               '2023-01-17', '2023-01-18', '2023-01-19', '2023-01-20',
               '2023-01-21', '2023-01-22', '2023-01-23', '2023-01-24',
               '2023-01-25', '2023-01-26', '2023-01-27', '2023-01-28',
               '2023-01-29', '2023-01-30', '2023-01-31', '2023-02-01',
               '2023-02-02', '2023-02-03', '2023-02-04', '2023-02-05',
               '2023-02-06', '2023-02-07', '2023-02-08', '2023-02-09',
               '2023-02-10'],
              dtype='datetime64[ns]', freq='D')
```

### 10. Create 2D list to DataFrame

lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]

df = pd.DataFrame(lists, columns =['S.No', 'Name', 'Age'])
print(df)
```

```
   S.No Name  Age
0     1  aaa   22
1     2  bbb   25
2     3  ccc   24
```
